Assistant Secretary for Science and Technology

OFFICE OF TELECOMMUNICATIONS

John M. Richardson, Acting Director

January 1975

**UNITED STATES DEPARTMENT OF COMMERCE  
OFFICE OF TELECOMMUNICATIONS  
STATEMENT OF MISSION**

The mission of the Office of Telecommunications in the Department of Commerce is to assist the Department in fostering, serving, and promoting the nation's economic development and technological advancement by improving man's comprehension of telecommunication science and by assuring effective use and growth of the nation's telecommunication resources.

In carrying out this mission, the Office

- Performs analysis, engineering, and related administrative functions responsive to the needs of the Director of the Office of Telecommunications Policy, Executive Office of the President, in the performance of his responsibilities for the management of the radio spectrum
- Conducts research needed in the evaluation and development of telecommunication policy as required by the Office of Telecommunications Policy, pursuant to Executive Order 11556
- Conducts research needed in the evaluation and development of other policy as required by the Department of Commerce
- Assists other government agencies in the use of telecommunications
- Conducts research, engineering, and analysis in the general field of telecommunication science to meet government needs
- Acquires, analyzes, synthesizes, and disseminates information for the efficient use of the nation's telecommunication resources.

Section D, Propagation through Turbulent, Clear Atmosphere -----	15
Section E, Measurements/Data -----	17
Section F, General -----	19

A BIBLIOGRAPHY OF RECENT WORK ON PROPAGATION  
IN THE RADIO SPECTRUM FROM 10 TO 100 GHz

F. K. Steele and S. F. Van Horn \*

References are presented on the subject of recent (1971 to mid-1974) work on radio propagation through the atmosphere at frequencies from 10 to 100 GHz. The references are separated into six major categories covering propagation through precipitation, multipath propagation, propagation through non-turbulent-clear and turbulent-clear atmospheres, measurements/data, and a general category.

Key Words: Attenuation, bibliography, gigahertz, micro-waves, millimeter waves, multipath, polarization, precipitation, propagation.

This report presents a bibliography on recent (1971 to mid-1974) work on the propagation through the atmosphere of electromagnetic waves nominally from 10 to 100 GHz. It follows an earlier bibliography by Vogler and Van Horn (OT/TRER-30), which covered propagation from 10 GHz to 1000 THz, and a report by Thompson et al. (OT/TRER-34), which reviewed propagation factors from 10 to 100 GHz. The present report loosely categorizes the references according to their relevance to subject areas of greatest information and need as identified by OT/TRER-34. These categories are:

- A. Propagation through precipitation.
  - (1) Attenuation (47 papers)
  - (2) Polarization (25 papers)
  - (3) General (27 papers)
- B. Multipath (16 papers)
- C. Propagation through non-turbulent-clear atmosphere (15 papers)

---

\* The authors are with the U. S. Department of Commerce, Office of Telecommunications, Institute for Telecommunication Sciences, Boulder, Colorado 80302.

- D. Propagation through turbulent-clear atmosphere (24 papers)
- E. Measurements/data (23 papers)
- F. General (104 papers)

The bibliography contains only reports originally in, or translated into, the English language. The reports appear in a variety of foreign and domestic media, such as proceedings of international symposia, technical journals, and organization reports. The symposia surveyed dealt primarily with radio propagation; the technical journals were concerned primarily with radio propagation, radio science, telecommunications, electrical and electronic engineering, physics, chemistry, electronics, meteorology, and general science. The organization reports were mainly U.S. Government-sponsored (unclassified), and most were found through the National Technical Information Service (NTIS). An NTIS Access Number (when known) is given for each Government-sponsored report cited. It is hoped that the reference list will aid propagation workers in finding references pertinent to their investigations, and that future bibliographies may be published as may be appropriate.

The reader is referred to a report entitled "A Survey of Earth-to-Satellite Propagation Factors Between 2.5 and 275 GHz," by D. A. Hill (OT Rept. 74-43, available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402), which contains many other valuable references.

The authors wish to thank Mr. L. E. Vogler and Ms. Victoria Schneller for their invaluable assistance in the preparation of this report.

## BIBLIOGRAPHIC DATA SHEET

	1. PUBLICATION OR REPORT NO.	2. Gov't Accession No.	3. Recipient's Accession No.
	OT REPORT 75-57		
4. TITLE AND SUBTITLE		5. Publication Date January 1975	
A Bibliography of Recent Work on Propagation in the Radio Spectrum from 10 to 100 GHz		6. Performing Organization Code OT/ITS	
7. AUTHOR(S) F. K. Steele and S. F. VanHorn		9. Project/Task/Work Unit No.	
8. PERFORMING ORGANIZATION NAME AND ADDRESS U. S. Department of Commerce Office of Telecommunications Institute for Telecommunication Sciences Boulder, Colorado 80302		10. Contract/Grant No.	
11. Sponsoring Organization Name and Address U. S. Department of Commerce Office of Telecommunications, ITS 325 Broadway, Boulder, Colorado 80302		12. Type of Report and Period Covered	
		13.	
14. SUPPLEMENTARY NOTES			
15. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)  References are presented on the subject of recent (1971 to mid-1974) work on radio propagation through the atmosphere at frequencies from 10 to 100 GHz. The references are separated into six major categories covering propagation through precipitation, multipath propagation, propagation through non-turbulent-clear and turbulent-clear atmospheres, measurements/data, and a general category.			
16. Key words (Alphabetical order, separated by semicolons) Attenuation, bibliography, gigahertz, microwaves, millimeter waves, multipath, polarization, precipitation, propagation.			
17. AVAILABILITY STATEMENT  <input checked="" type="checkbox"/> UNLIMITED.  <input type="checkbox"/> FOR OFFICIAL DISTRIBUTION.		18. Security Class (This report)  UNCLASSIFIED	20. Number of pages
